

Cornerstone

Client: Elekta Limited
Size: 12,150m²
Value: £22m phase 1
Status: Completed 2018

The Cornerstone building forms the first phase of a site masterplan for Elekta—a global pioneer in the treatment of cancers—whose oncology products are designed, developed and built at its adjacent site in Crawley, West Sussex.

The five storey, Grade A building, was developed by rhp to detailed planning receiving unanimous approval at Committee in November 2014.

The concept design is based around a large atrium crossed by 'communication bridges' linking

departments. Once completed, the building will provide Elekta with a high-quality open plan office environment enabling new, more collaborative ways of working, with break-out, touchdown, meeting areas and social spaces. The ground floor accommodates demonstration facilities as well as a cafeteria and a restaurant. The extensive landscaping will form a unique amenity within the locality for employees and was a critical element of the Client brief.
